

HDS INTEGRATED TRAINING & TACTICAL COMMAND CONTROL SYSTEM (ITACCS)

HDS Integrated Training & Tactical Command Control System (ITACCS) is a unified platform that integrates simulation-based training with real-time command and control capabilities across multiple operational domains. It supports mission planning, execution, and coordination while enabling forces to train using realistic, scenario-driven environments.

The system can be configured to incorporate various current assets, including air, land, maritime, and unmanned systems, ensuring seamless interoperability. With real-time data integration, decision support tools, and after-action review capabilities, HDS ITACCS enhances operational readiness, improves tactical decision-making, and ensures effective coordination across joint and multi-agency operations.
