

SECURED COMMAND AND CONTROL

We provide high-performance video, data, and peripheral signal distribution solutions, primarily through KVM (keyboard, video, mouse) and AV-over-IP systems. Its products enable organizations to securely transmit and manage high-resolution video and computing signals over long distances with low latency, making them critical for mission-critical environments like defense, government, broadcast, and command-and-control centers.

By centralizing computing resources while allowing remote access and control, We help improve security, operational efficiency, and scalability for complex, data-intensive operations.

Key Features:

- Instant situational awareness.
- Enable real time collaboration.
- Multiple classification in one system.
- Reduce insider threat.
- Lower total cost of ownership.
- Certified signal isolation architecture.
- Information assurance accredited.
